## Here's How to Upcycle A Dresser

### Step #1: Prepare Your Piece

Remove all the drawers, hardware, and feet from your furniture. Ensure the piece is stable, as a wobbly base can make painting and repairs more difficult. This preparation will set the foundation for a flawless finish.

### Step #2: Repair Any Damage

Inspect your furniture for holes or cracks. Use wood filler to smooth out imperfections. Once applied, allow the filler to dry completely before proceeding to the next step.

### Step #3: Sand and Clean

After the filler is dry, lightly sand it to smooth it. Sanding ensures a seamless surface for painting. Once finished, wipe away dust and debris with a clean cloth to keep your surface pristine.

### Step #4: Choose Your Paint

Now comes the fun part—painting! Use BeautiTone Furniture and Cabinet paint for a durable and professional-looking finish. This paint perfectly creates a smooth pearl sheen that elevates your piece.

### Step #5: Paint with Precision

Using a flocked foam paint roller, paint can be applied to all surfaces, including any overhangs under the drawers. This type of roller ensures a smooth and even coat. Let the first coat dry for 12 hours before applying the second coat.

### Step #6: Add a Second Coat

Apply the second coat like the first, ensuring every surface is evenly covered. This step adds depth and durability to your finish.

### Step #7: Customize the Drawers

Paint the inside and sides of the drawers for an extra touch of flair. This unexpected detail can add colour or contrast to your finished piece.

### Step #8: Reassemble and Decorate

Once the paint has dried completely, reinstall the drawers, doors, and new hardware. The finishing touches—like decorative knobs or modern pulls—can make all the difference.

---

Your furniture now has a new lease on life. Add your favourite treasures or decor to showcase your style and enjoy your one-of-a-kind masterpiece. Upcycling is not just about sustainability; it's about creativity and making something uniquely yours!
